

Project Id: UY6758GH

Task: Develop a Personal Finance Management Application

Objective:

Create a command-line application that helps users manage their personal finances by tracking income, expenses, and generating financial reports.

IMPORTING THE PROJECT:

To import and set up the Personal Finance Manager, follow these steps:

1. Extract the project zip file. You will get 2 files after extracting the zip file. One will be the finance_manager folder and others will be the 'FINANCE_DB.SQL'.
2. Make sure that Mysql and Apache are running in the background on the xampp. Open my Phadmin and then you have to import the database. I have already mentioned how to Import the Database in Sql in the Requirements.pdf with video tutorial link attached as well.
3. After Importing the Database, make sure to copy the finance_manager folder, and you can directly paste it into C Drive or you can paste anywhere according to your needs.
4. Make sure that all paths of python and xampp are set in Environmental Variables. I have also mentioned how to set a path and variables for requirements.pdf.
5. Make sure that all modules are imported properly and properly installed using pipes. It is also Mentioned in Requirements.pdf.
6. After successful installation, make sure to check out the user manual on how to use the project.
